Palmpay sales analysis: strategic brief

United States and Germany, 2007 to 2011 | Brandy Sango

Purpose

Present five years of Palmpay sales (2007 to 2011, United States and Germany) clearly enough that anyone can follow it, and publish the work as a portfolio project. The first version answered the Business Intelligence Analyst assessment in October 2025. This is the October 2026 rebuild.

Audience

A general audience with no data background, such as a hiring panel, colleagues or a LinkedIn reader. Slides carry one big number and one short headline. Detail and wording for the speaker are in the notes.

The one message

Palmpay is sound but uneven. Germany and three bike lines carry the business, the US never recovered from 2008, and sales peak in spring.

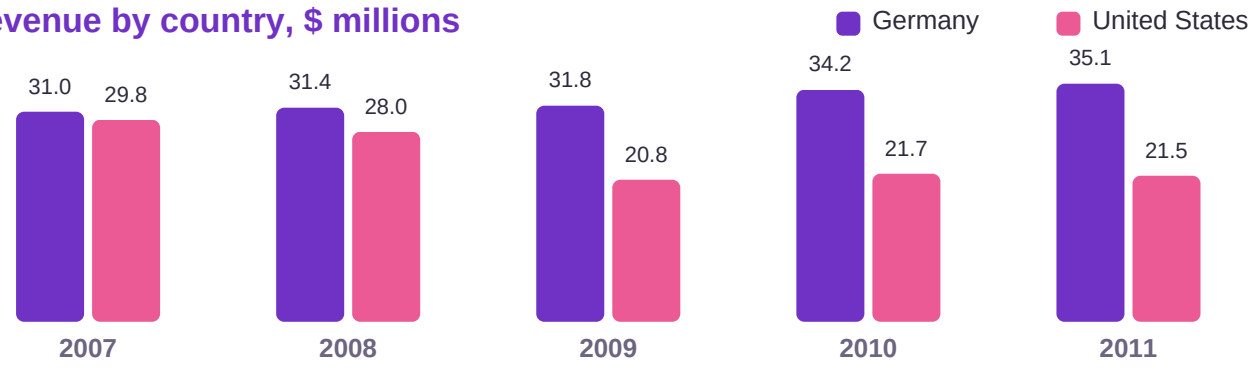

$285M	$149M	52.3%	169K
revenue	gross profit	margin	items sold

Storyline

The deck follows the assessment's questions, so each answer can be found and checked.

1	**Title**	Cover
2	**Five years, two countries, one currency (US dollars)**	Method | Report page 1
3	**$285M revenue, $149M gross profit, 52.3% margin, 169K items**	Overview | Report page 2
4	**Germany grew every year; the US fell 26% in 2009 and stayed down**	A1, A2 | Report page 3
5	**Sales fell 24% in January 2009 (US -46%, Germany -10%)**	A3 | Report pages 4, 5
6	**Touring bikes lead revenue every year (37 to 40%)**	B2 | Report page 6
7	**Fixed Gear Bike Plus is the flop: 72 units in five years**	B1 | Report page 6
8	**Off-road bikes are 37.5% of 2011 bicycles; München, Denver and Irvine lead**	B3 | Report page 7
9	**54% of revenue arrives in April to June; the First Aid Kit has no season**	B4 | Report page 8
10	**Five recommendations, biggest gap first**	B5 | Report page 12
11	**Conclusion and limits**	Report pages 11, 12

Revenue by country, $ millions

Speech, rules, publishing

The speech

- Written to be spoken in the first person, about 10 minutes at a calm pace.
- Each slide gets one number, one sentence of meaning and one sentence of action.
- Evidence is kept apart from cause. The data shows when sales fell, not why, so the 2008 crisis is described as the likely cause, not a proven one.
- A list of likely questions with answers sits at the end of the speech file.

Rules the numbers follow

US dollars only

Every figure is in US dollars. German sales are recorded in euros, which come out lower than the dollar totals, so only the dollar columns compare the two countries fairly.

One exclusion

Silicon Valley Bikes is excluded only for the 2008 crisis question (A3). Everywhere else it is included.

What a flop is

"Flop" means the product with the fewest units sold in a year, counting only products that sold that year.

Checked twice

All figures were checked against the Power BI model and the source workbook.

Publishing

GitHub repository palmpay-bi-assessment (public). The README says plainly that the 2025 version answered the assessment and this one is a 2026 rebuild.

Included: README, 12 page screenshots, the Power BI project files (no raw data), the deck, the speech and this brief.

Left out: the Excel data file, the assessment PDF, both .pbix files and the cached data inside the project. The data belongs to the employer that set the test.
